## Of the Eclipses this year.

Although there will be 4 Eclipses this year; 2 of the Sun and 2 of the Moon, yet will the 1 of the Sun only be seen in our Horizon. It will be in the morn. upon Friday the 22 day of June, and is of some bigness.

The beginning of it will be at 28 min. past 5 in the morn. the middle at 24 min. past 6 & the end at 26 min. past 7. So that the whole time (from first to last) will be 2 hours wanting 2 min. that is to say 1 hour and 58 min. and the Digits eclipsed will be 7 & 25 min.

This Conjunction of the Sun and Moon, at the time of this Eclipse, will be in 10 degrees and 22 minutes of Cancer; and what the effects may be, I leave to other men to judge.

In this Month of June also at the Full M. there is another Eclipse: for the Moon will be then eclipsed, and be 13 min. high before it be ended. Yet then will be so little of that Eclipse left, and so many vapours about the Moon, as it will be nothing at all discerned here in Eng. but in Ital. German. Sicilie Polon. and Hungar. the end of it may be seen.

Times prohibiting Marriage this year. Marriage comes in on the 13 day of January, and at Septuagesima Sunday it is out again until Low Sunday; at which time it comes in again, and goes not out till Rogation Sunday: thence it is forbidden until Trinitesunday: from whence it is unforsidden till Advent Sunday: but then it goes out, and comes not in again till the 13 day of January next following.

First find the new moon, full, or quarter, in the Kalender; then count how many days are past either of those, and under the same number of days past, you shall here see the time that the moon will be fourth the same day: Then look for the Haven or Port you desire, and where the hours and quarters stand before the same, there it is high-water for many hours and quarters before the time above found: But where the hours and quarters stand after the place, there it is high-water for long after the time past found. As for example:

The Moon being five days past the change, and five days old, I find
